Executive Summary

The Current Corporate Experience Does Not Meet User Needs

The Core Problem

- Retail-first mobile experience
- Fragmented corporate user journeys
- Limited visibility of employee benefits and policy information
- High dependency on customer support

Recommended Solution

Introduce a dedicated Corporate Experience within the existing application instead of rebuilding it. This approach improves the corporate user experience while minimizing implementation effort and business risk.

Key Benefits

- Improves the corporate user experience
- Preserves the existing retail experience
- Enables phased implementation with lower business risk
- Creates a foundation for future corporate enhancements

Recommendation: Introduce a Modular Corporate Experience through a phased MVE approach.

Current Challenges

Key Business Challenges

Identity Confusion

Employees with both retail and corporate policies may find it difficult to identify the correct policy while using the application, increasing the risk of selecting the wrong policy during claims or while accessing benefits.

Limited Benefit Visibility

Corporate employees have limited visibility into employer-sponsored benefits, coverage details, and wellness programs, making it difficult to understand and utilize available benefits..

Limited Claims Visibility

Employees have limited visibility into the status of claims and pre-authorization requests, resulting in frequent follow-ups with customer support.

HRMS Synchronization Delays

Delays in HRMS synchronization can lead to incorrect employee eligibility, delayed onboarding, or continued system access after an employee leaves the organization.

Key Business Objectives

1

Improve Policy Selection Experience

Enable employees to clearly identify and access the correct retail or corporate policy before initiating any transaction.

2

Improve Benefit Visibility

Make employer-sponsored benefits, coverage details, and wellness programs easily accessible within the application.

3

Automate Employee Lifecycle Processes

Synchronize employee onboarding, profile updates, and offboarding through HRMS integration.

4

Reduce Support Tickets by 30%

Reduce app-related support tickets by 30% within six months by improving the corporate user experience.

Key Stakeholders and Their Expectations

Key Stakeholder Considerations

HR vs Data Privacy

HR requires visibility into employee enrollment and eligibility, while employees expect their personal health information to remain confidential.

Speed vs Fraud Control

Employees expect faster claims processing, while the business requires appropriate validation to reduce incorrect claims and fraud.

Retail vs. Corporate Experience

Retail and corporate users have different expectations and workflows. The product should support corporate user journeys while preserving the existing retail experience.

User Personas

Key User Personas

Arjun

Software Engineer

Uses the app to access benefits, submit claims, and download e-cards. Expects a simple and seamless corporate experience.

Priya

HR Benefits Manager

Manages employee enrollment and policy administration. Needs accurate HRMS synchronization and operational visibility.

Vikram

Insurance Operations Lead

Manages claims operations and eligibility validation. Needs accurate data to ensure efficient processing and regulatory compliance.

Current Corporate User Journey

The current experience creates confusion, increases support dependency, and makes it difficult for corporate employees to access benefits and complete key tasks efficiently.

Why the Current Experience Falls Short

Primary Root Causes

- ➔ **Architecture**

The application was designed primarily for retail users and does not fully support corporate-specific workflows or policy context
- ➔ **Identity**

Users with both retail and corporate policies cannot easily identify the correct policy while performing transactions.
- ➔ **Integration**

Manual HRMS synchronization delays employee onboarding, offboarding, and eligibility updates, resulting in inconsistent employee information.

Product Vision

Future Corporate Experience

A Seamless Experience for Retail and Corporate Users

Enable corporate users to easily access benefits, policies, and services without impacting the existing retail experience.

Contextual Identity Clearly distinguish between retail and corporate policies to help users access the correct benefits and services.	Employer Benefits Visibility Provide easy access to employer-sponsored benefits, coverage details, and wellness programs.
Automated Lifecycle Synchronize employee onboarding, profile updates, and offboarding through HRMS integration.	Self-Service First Enable users to manage claims, policy information, and related services without depending on customer support.

Solution Evaluation and Recommendation

Recommended Approach

A modular corporate experience can be introduced within the existing application with lower implementation risk, faster delivery, and minimal impact on current retail users. This approach also provides a strong foundation for future enhancements.

Recommendation: Implement a modular corporate experience within the existing application to deliver faster business value while preserving the retail user experience.

Proposed Future Journey — TO-BE

Future Corporate User Journey

The proposed journey simplifies the corporate user experience by reducing confusion, improving self-service, and providing easier access to benefits, policies, and claims.

Future Enhancements

The following features are planned for future phases to keep the initial release focused and achievable

- AI-powered claim prediction or fraud scoring
- Cashless OPD network integration (Phase 2)
- Gym/wellness partner API integrations (Phase 2)
- HR analytics dashboard (Phase 2)
- Multi-language and accessibility enhancements (Phase 3)
- Predictive benefit recommendations (Phase 3)

A focused MVE enables faster delivery, reduces implementation risk, and delivers early business value.

Feature Prioritization for Phase 1

The PRD in One Slide: Scope, Rules, and Acceptance Criteria

Business Rules & Constraints

Key Business Rules

- Policy context must be selected before any transaction.
- Retail and corporate experiences remain independent.
- HR receives aggregate insights only; no individual medical data.
- Employee eligibility is managed through HRMS synchronization.
- Insurance platform owns policy data; HRMS owns employee data.

Non-Functional Requirements

01

Security & RBAC

Role-based access for Employee, HR, and Ops. OAuth 2.0 + MFA for corporate login.

02

Performance

Dashboard load time <2 seconds. Application availability: 99.9%.

03

Auditability

All eligibility checks, context switches, and transactions logged with immutable audit trail.

04

Data Privacy

Corporate and retail data fully isolated at service layer. DPDP Act compliance. Consent-managed data sharing.

05

Scalability

Supports future growth in corporate users without major architectural changes..

In Scope

Corporate identity, policy context, benefits dashboard, HRMS integration, claims status, dependent management, digital e-card.

Out of Scope

Retail journey enhancements, wellness partner integrations, AI-powered features, claim adjudication, and new claims engine.

Modular Overlay Architecture — Corporate Experience as an Isolated Layer

The mobile application provides a unified experience, while business data remains within the respective backend systems. The corporate experience is enabled only for eligible users, ensuring it remains separate from the existing retail experience.

Employee Lifecycle Workflow — From Onboarding to Benefits Activation

HRMS serves as the source of employee information, while the insurance platform manages policy and benefits data. Automated synchronization ensures accurate employee eligibility and a seamless onboarding experience.

Backend Components, API Flow & Data Management

Key Engineering Decisions

API Versioning

Separate APIs for corporate services enable independent enhancements without impacting the retail experience.

Event-Driven HRMS Sync

Employee data is automatically synchronized from HRMS to ensure accurate eligibility and timely updates

RBAC Enforcement

Role-based access ensures employees, HR, and operations teams can access only the information relevant to their responsibilities.

Data Isolation

Retail and corporate data remain logically separated to ensure security, privacy, and regulatory compliance..

Success Metrics for Phase 1

Business KPIs

- App-related support tickets ↓ **30%** in 6 months
- Wrong-policy transaction rate → **0%**
- Corporate feature adoption ≥ **70%**
- Self-service completion rate ≥ **70%**

Customer KPIs

- Benefit discovery completion ≥ **60%**
- Corporate NPS improvement ≥ **15 points**
- Identity-linking success rate ≥ **98%**
- Claims status visibility without support ≥ **80%**

Operational KPIs

- HRMS sync success rate ≥ **98%**
- Joiner processing time ≤ **24 hrs**
- Leaver access revocation ≤ **4 hrs**
- Failed sync alert-to-resolve ≤ **8 hrs**

Technical KPIs

- API latency P95 ≤ **1.5s**
- App crash rate ≤ **0.1%**
- Platform availability ≥ **99.9%**
- Failed sync rate ≤ **2%**

Product Roadmap

Product Roadmap (18 Months)

1

Phase 1 — MVE

Months 1–6

Corporate identity & context selector, benefits dashboard, HRMS integration, digital e-card, claims status tracking, and dependent management.

2

Phase 2 — Operational

Months 7–12

Cashless OPD network, wellness benefit integration, HR reporting portal, bulk HRMS upload, employee transfer management, and self-service claim submission.

3

Phase 3 — Intelligent

Months 13–18

AI-powered benefit recommendations, AI-assisted pre-authorization, multilingual support, partner ecosystem integrations, wellness recommendations, and advanced analytics.

Build Smart, Ship Fast, Scale Safely

Top Risks & Mitigations

HRMS Integration Complexity

Corporate clients may use different HRMS platforms.

Mitigation: Support standard HRMS integrations in Phase 1 and expand connector support in future releases.

Corporate & Retail Data Separation

Corporate and retail data must remain logically separated to ensure security and compliance.

Mitigation: Maintain separate data access rules, supported by API-level validation and audit logging.

Impact on Existing Retail Experience

Changes for corporate users should not affect existing retail users.

Mitigation: Deploy the corporate experience as a separate module with phased rollout and testing.

The Executive Recommendation

Implement the Modular Corporate Experience within the existing mobile application through a phased MVE approach.

This approach delivers business value faster, minimizes implementation risk, preserves the existing retail experience, and provides a scalable foundation for future enhancements.

A complete rebuild is not recommended, as similar business outcomes can be achieved incrementally with lower cost, lower risk, and faster delivery.
